Rural Analysis — FE Selection Report

(sample = _sample, suffix = _test)

proj_bureaucrats_farms

April 15, 2026

This report collects the event-study and interaction plots generated from the sbatch test run over fixed-effects specifications {`1, 8, 16, 24, 32`} on the `_sample` subset, rural grids (`is_rural_area`). For every FE spec, the event-study builder produces an original panel and a linear-detrended ("rotated") panel. The interaction builder produces one lincom plot per FE spec for each of the two triple-interaction DiD regressions.

Contents

1 Event studies — Politician characteristics (_app_16) **2**

2 Event studies — Protest (_app_17) **7**

3 Interaction DiD — Protest with downup_ac (_app_18) **12**

4 Interaction DiD — Politician characteristics with downup_ac (_app_19) **15**

1 Event studies — Politician characteristics (_app_16)

Dependent variable: fires per 1,000 units. Base event period: $t = -1$.

FE specification fe1 (slot 'evreg1')

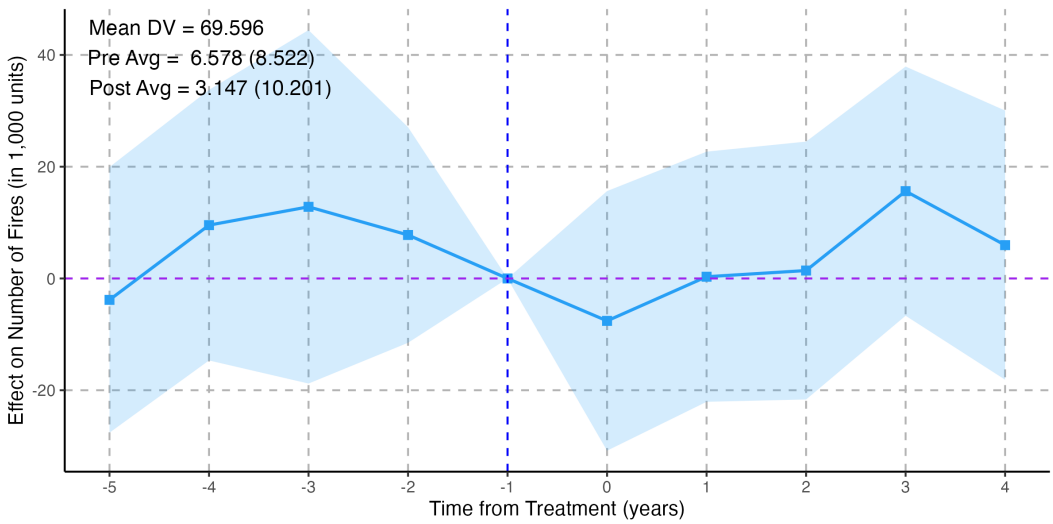

Figure 1: Event study, original (fe1)

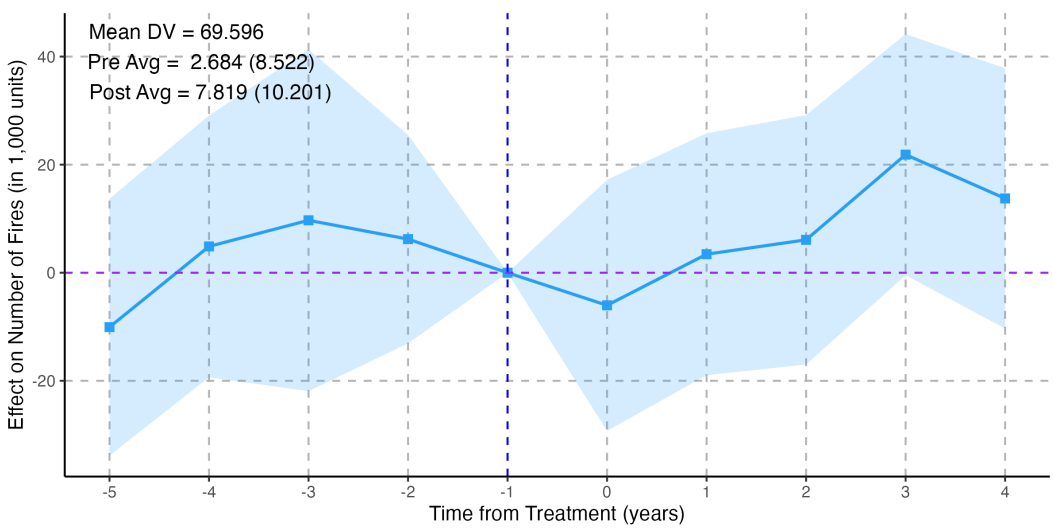

Figure 2: Event study, linear-detrended (fe1)

FE specification `fe8` (slot 'evreg2')

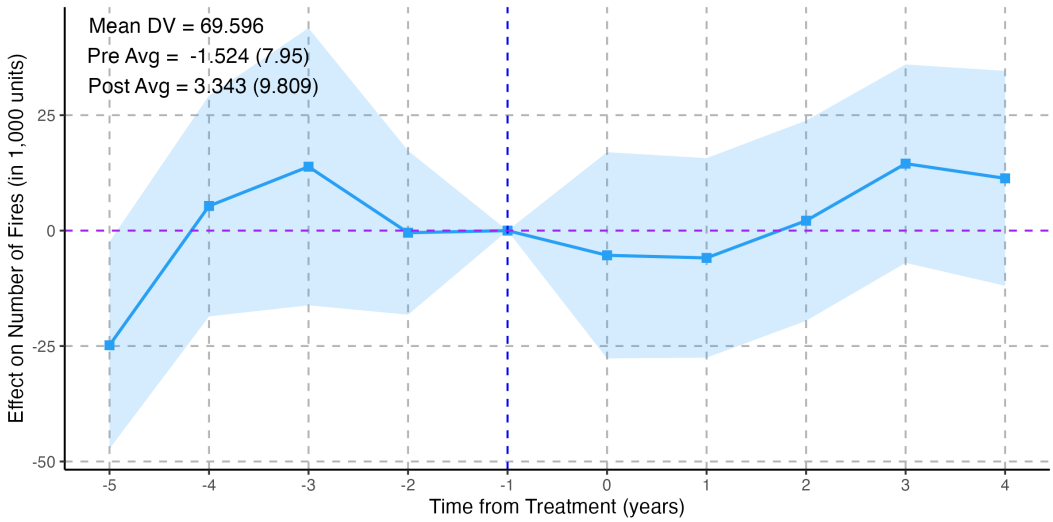

Figure 3: Event study, original (fe8)

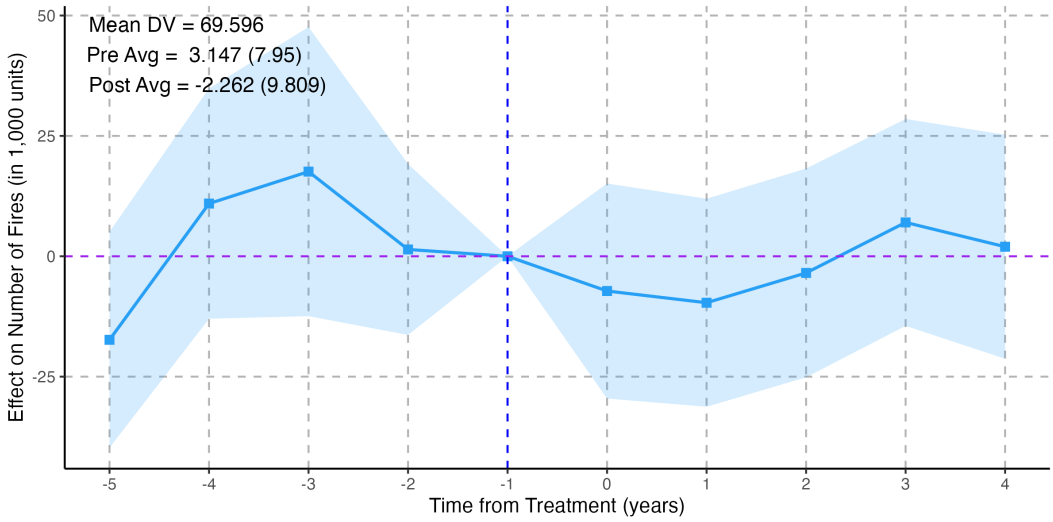

Figure 4: Event study, linear-detrended (fe8)

FE specification `fe16` (slot 'evreg3')

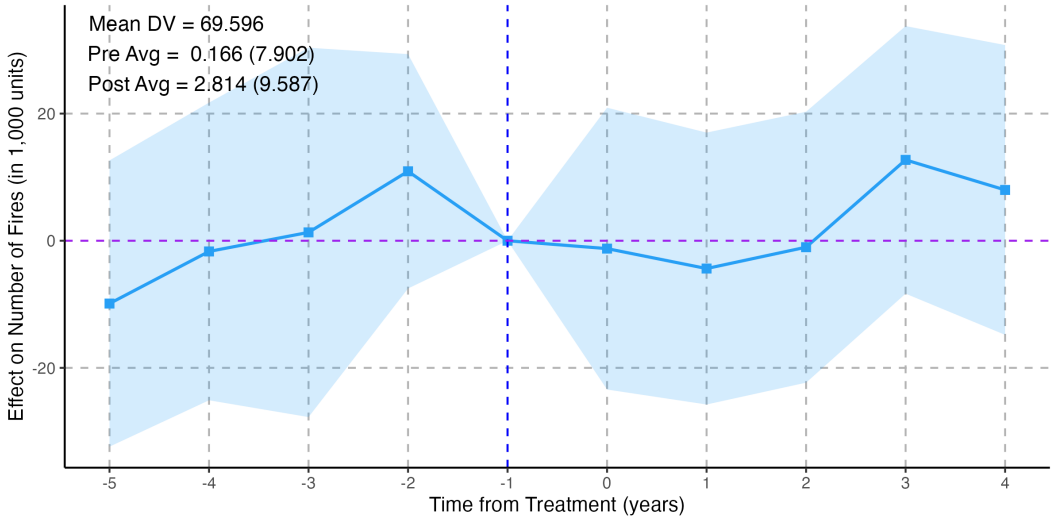

Figure 5: Event study, original (fe16)

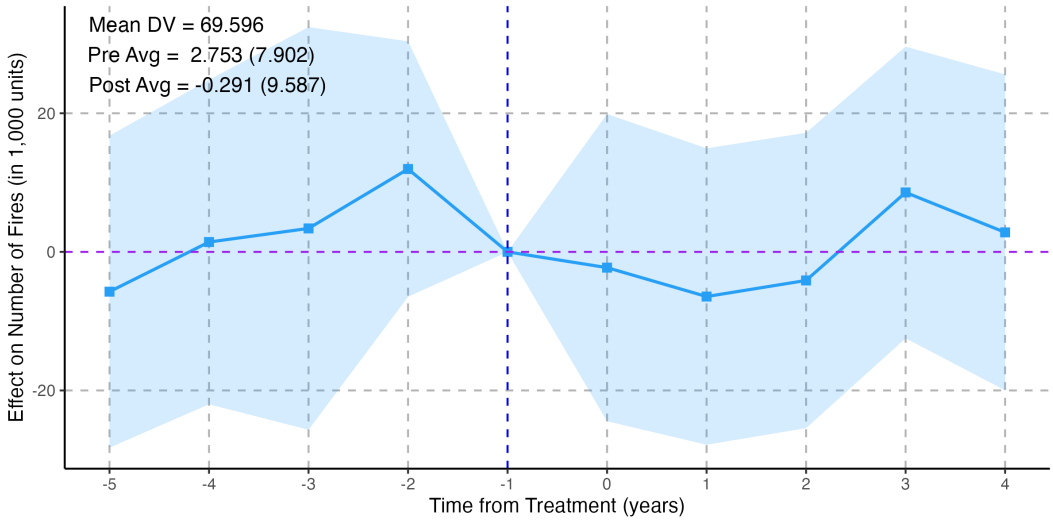

Figure 6: Event study, linear-detrended (fe16)

FE specification `fe24` (slot 'evreg4')

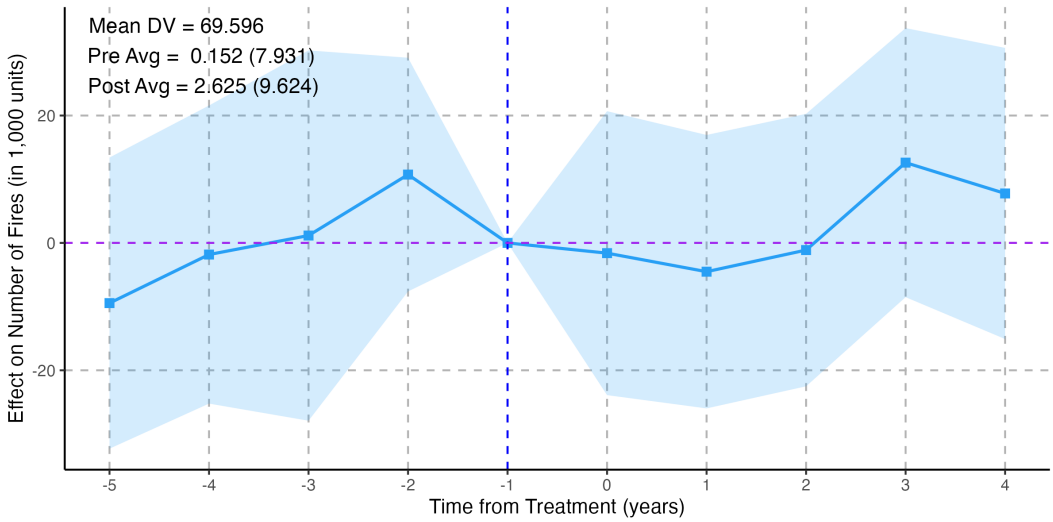

Figure 7: Event study, original (fe24)

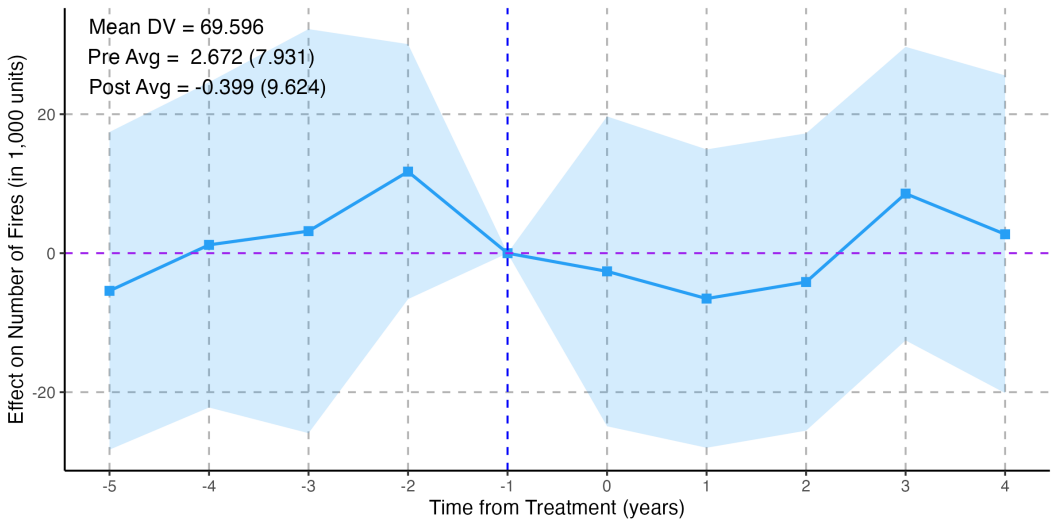

Figure 8: Event study, linear-detrended (fe24)

FE specification `fe32` (slot 'evreg5')

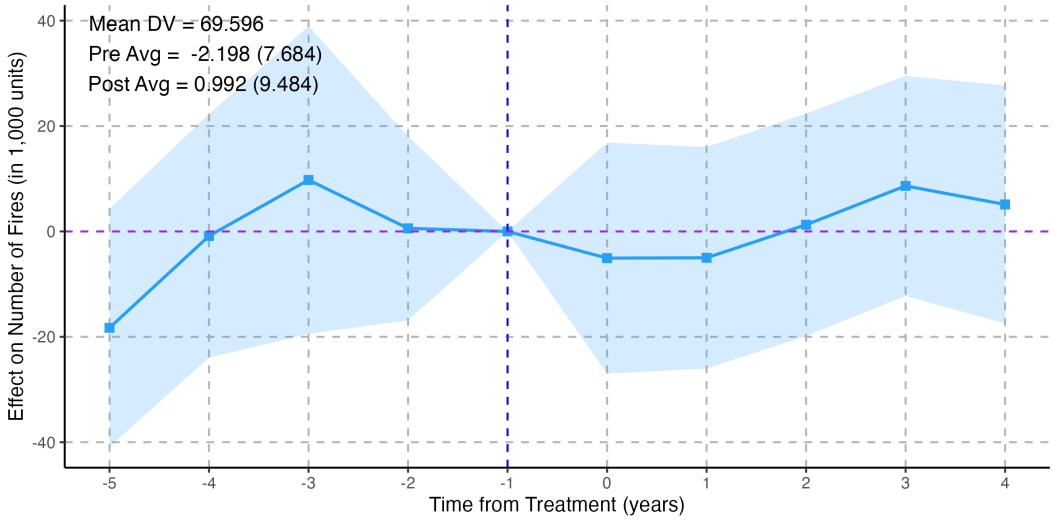

Figure 9: Event study, original (fe32)

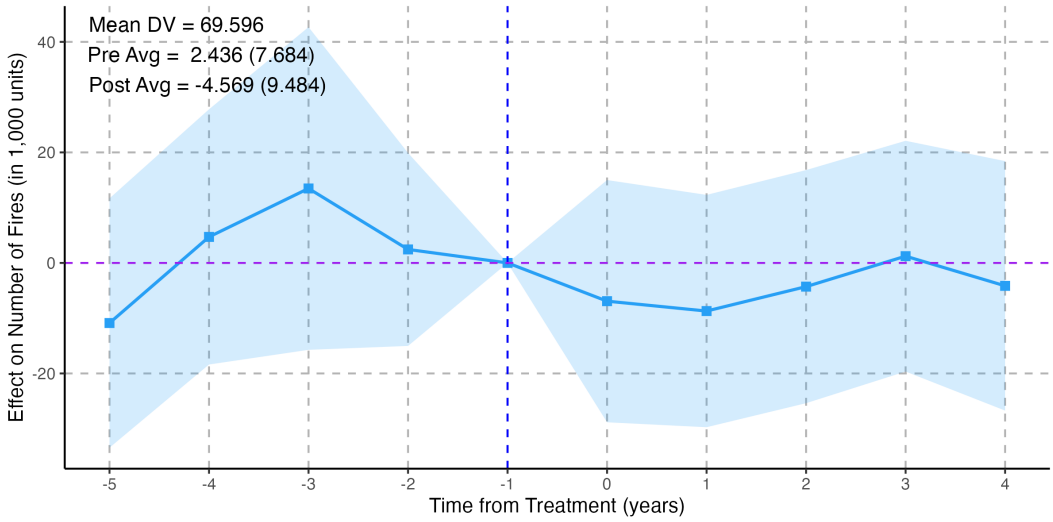

Figure 10: Event study, linear-detrended (fe32)

2 Event studies — Protest (_app_17)

Dependent variable: fires per 1,000 units. Base event period: $t = 0$.

FE specification fe1 (slot 'evreg1')

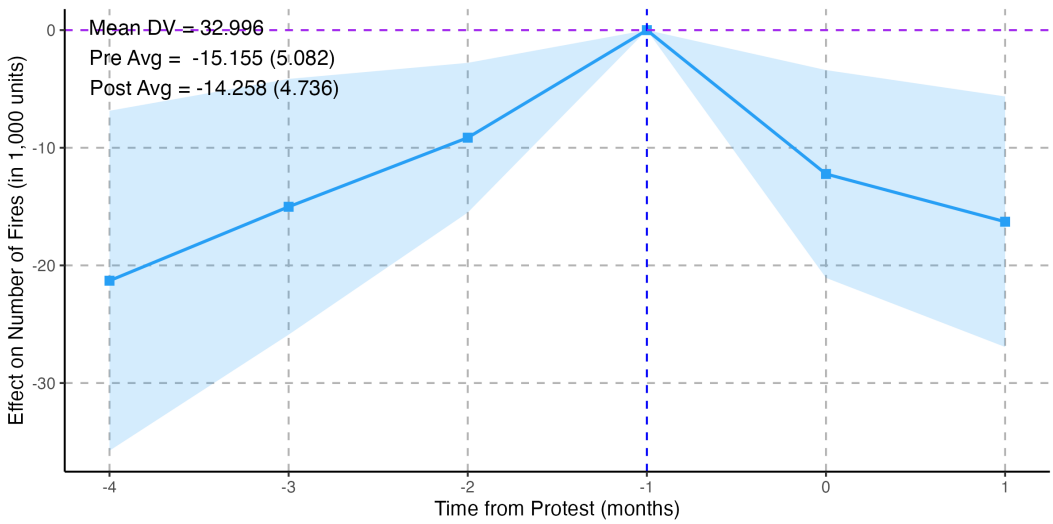

Figure 11: Event study, original (fe1)

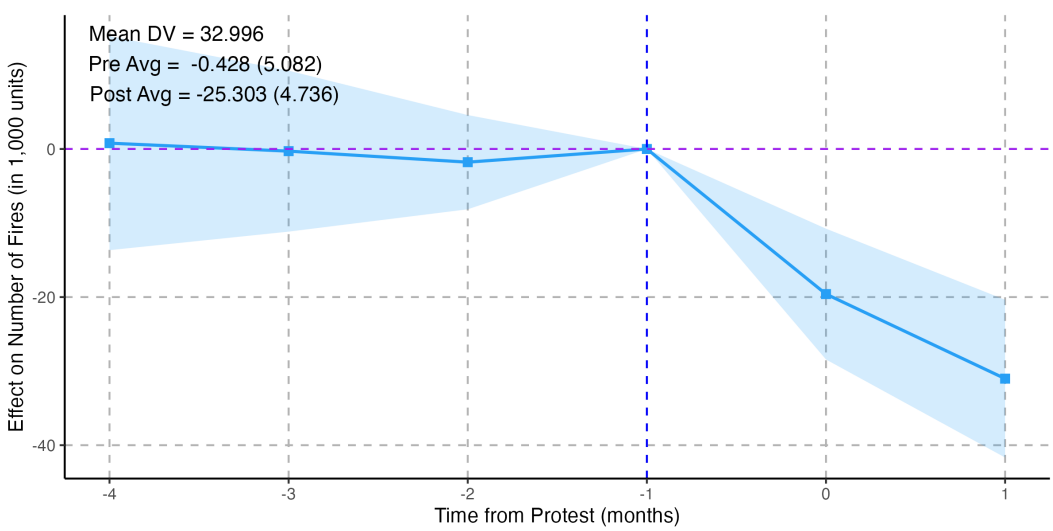

Figure 12: Event study, linear-detrended (fe1)

FE specification `fe8` (slot 'evreg2')

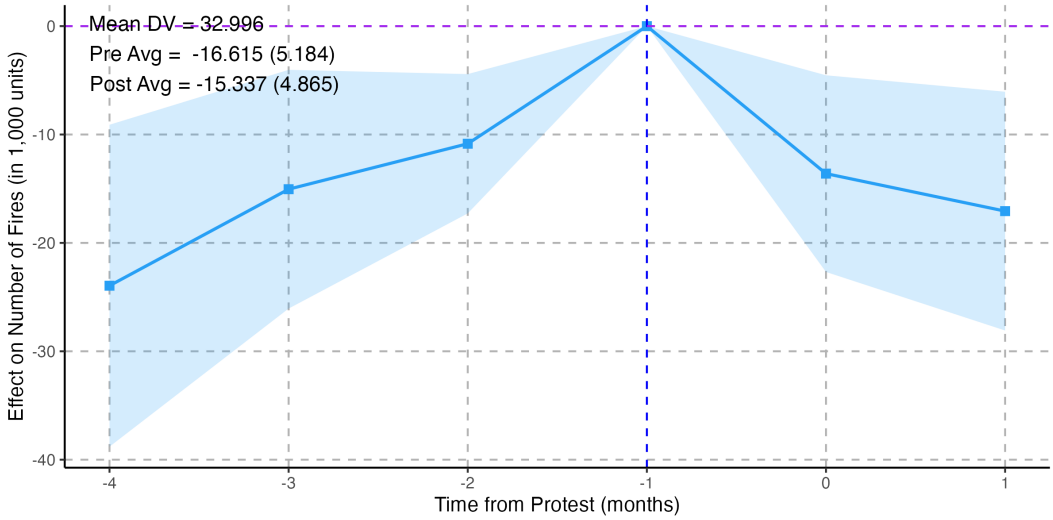

Figure 13: Event study, original (fe8)

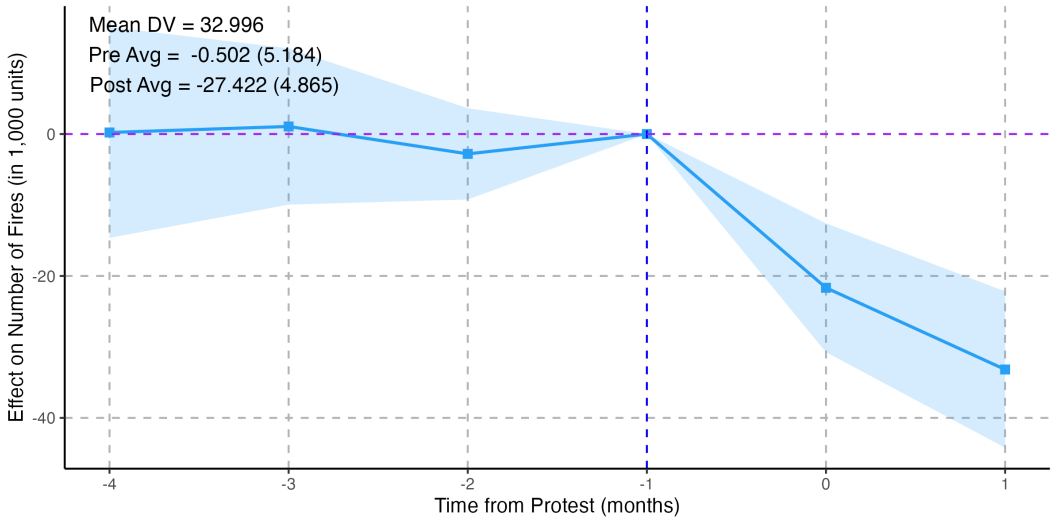

Figure 14: Event study, linear-detrended (fe8)

FE specification `fe16` (slot 'evreg3')
